AT1175

Preliminary Product Information

8-Bit 20MSPS CMOS VIDEO A/D CONVERTER

Features

- Resolution: 8-Bit ± 0.5 LSB(DNL)
- Maximum Conversion Rate: 20 MSPS
- Built-in Sample and Hold Function
- Built-in Reference Voltage Self Bias Circuit
- Single +5.0 V Power Supply
- Three-State TTL Compatible Output
- Direct Replacement for the Sony CXD1175

Applications

- Video Digitizing
- Personal Computer Video
- Multimedia
- Digital Television

General Description

The AT1175 is a CMOS two-step A/D converter capable of digitizing full-scale analog input signals into 8-bit digital words at sample rate of 20 MSPS.

For most application, no external sample-and-hold or video driving amplifiers are needed thanks to the device's narrow aperture time, wide bandwidth, and low input capacitance.

The AT1175 operates from a single +5.0V power supply and has an internal voltage reference, which eliminates the need for external reference circuitry. All digital inputs are CMOS compatible and the tri-state outputs are TTL-compatible. The AT1175 is ideal for most video and image processing applications that require low power dissipation and low cost.
