Triggered Spark Gaps Ceramic-Metal

PerkinElmer's Triggered Spark Gaps are a family of versatile high voltage switches. They consist of three electrodes in a hermetically sealed, pressurized ceramic envelope. Triggered Spark Gaps are generally characterized by a peak current capability of thousands to tens of thousands of amperes, delay times of tens of nanoseconds, arc resistance of tens of milliohms and inductance of 5 to 30 nanohenries. They are suitable for capacitor switching applications such as flash-lamps, electrically pumped gas lasers, medical lithotripters, and as crowbar protection devices.

Features

- Fast switching operation
- High voltage holdoff
- Ceramic-metal construction
- No warm up period
- High current capability
- Long life

Notes

- Optimum operating voltage is typically 60 to 80% of SBV.
- Operation below minimum value may result in erratic firing over time.
- Operation at this value may result in self-firing over time.
- Represents minimum main-gap breakdown voltage with no trigger applied.
- Value shown contains safety factor for end-of-life requirements.
- PerkinElmer TM-11A Trigger Module can be used to trigger all gaps.
- Transformers listed vary mechanically and electrically. See PerkinElmer Transformer Data Sheet.
- These units must be operated in a liquid or gas dielectric to prevent external flashover: GP-70 and GP-14B, above 24 kV; GP-32B and GP-15B, above 35 kV; GP-74B and GP-81B, above 60 kV.
- Designed for high altitude, high holdoff conditions.
- Other voltage ranges and mechanical configurations are available on request; for example, the GP-20B can be supplied with a 6 to 16 kV operating range by specifying GP-20B-20. The 20 would be the SBV and E-E maximum would be 80% of SBV = 16kV.
- E = Stored energy in joules ($\frac{1}{2}CV^2$), I_b = average current in amperes, I_p = RMS current in amperes, R = total circuit resistance in ohms, P = average power in watts.

Environmental Specifications

Ambient temperature range	
Operating temperature range	-54 to +100°C
Nonoperating temperature range	-65 to +125°C
Vibration	15 to 500 Hz at 10 g maximum
Shock	50 g, 11 milliseconds
Thermal Shock	-65 to +125°C

Electrical Specifications

Electrode capacity	Less than 5 pf.
Interelectrode resistance	Greater than 10 ¹⁰ ohms at 500 V.

Mechanical Specifications

Envelope	Ceramic-metal, hermetically sealed, exposed metal parts nickel plated.
Torque applied to studs	6 inch-pounds maximum.
