

**30MHz, Digitally Selectable Four Channel Operational Amplifier**

The HA-2406 is a monolithic device consisting of four op amp input stages that can be individually connected to one output stage by decoding two TTL lines into four channel select signals. In addition to allowing each channel to be addressed, an enable control disconnects all input stages from the output stage when asserted low.

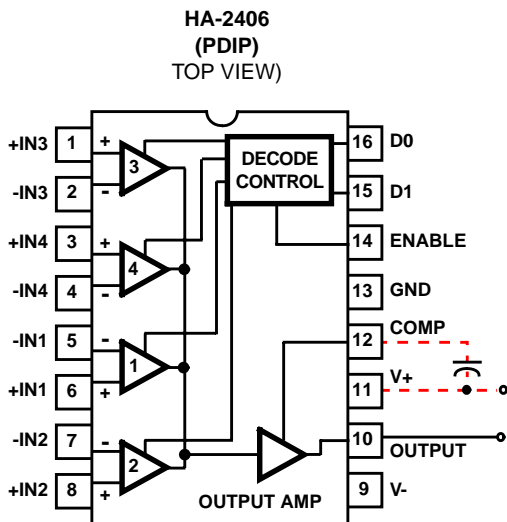

Each input-output combination of the HA-2406 is designed to be a 20V/μs, 30MHz gain-bandwidth amplifier that is stable at a gain of ten. By connecting one external 15pF capacitor all amplifiers are compensated for unity gain operation. The compensation lead may also be used to limit the output swing to TTL levels through suitable clamping diodes and divider networks (see Application Note AN514).

Dielectric isolation and short-circuit protected output stages contribute to the quality and durability of the HA-2406. When used as a simple amplifier, its dynamic performance is very good and when its added versatility is considered, the HA-2406 is unmatched in the analog world. It can replace a number of individual components in analog signal conditioning circuits for digital signal processing systems. Its advantages include saving board space and reducing power supply requirements.

During Disable Mode  $V_{OUT}$  goes to  $V_-$ . For high output impedance during Disable, see HA2444.

For further design ideas, see Application Note AN514.

**Features**

- TTL Compatible Inputs
- Single Capacitor Compensation
- Low Crosstalk. . . . . -110dB
- High Slew Rate. . . . . 20V/μs
- Low Offset Current . . . . . 5nA
- Offset Voltage. . . . . 7mV
- High Gain-Bandwidth . . . . . 30MHz
- High Input Impedance . . . . . 30MΩ
- Compensation Pin for Unity Gain Capability

**Applications**

- Digital Control Of
  - Analog Signal Multiplexing
  - Op Amp Gains
  - Oscillator Frequencies
  - Filter Characteristics
  - Comparator Levels

NOTES:

1. Controlling Dimensions: INCH. In case of conflict between English and Metric dimensions, the inch dimensions control.
2. Dimensioning and tolerancing per ANSI Y14.5M-1982.
3. Symbols are defined in the "MO Series Symbol List" in Section 2.2 of Publication No. 95.
4. Dimensions A, A1 and L are measured with the package seated in JEDEC seating plane gauge GS-3.
5. D, D1, and E1 dimensions do not include mold flash or protrusions. Mold flash or protrusions shall not exceed 0.010 inch (0.25mm).
6. E and  $e_A$  are measured with the leads constrained to be perpendicular to datum  $-C-$ .
7.  $e_B$  and  $e_C$  are measured at the lead tips with the leads unconstrained.  $e_C$  must be zero or greater.
8. B1 maximum dimensions do not include dambar protrusions. Dambar protrusions shall not exceed 0.010 inch (0.25mm).
9. N is the maximum number of terminal positions.
10. Corner leads (1, N, N/2 and N/2 + 1) for E8.3, E16.3, E18.3, E28.3, E42.6 will have a B1 dimension of 0.030 - 0.045 inch (0.76 - 1.14mm).
