### 74LVT623

3.3 V octal transceiver with dual enable, non-inverting (3-State)

Product specification Supersedes data of 1999 Jul 09 File under Integrated Circuits, IC24 Handbook

### 3.3 V octal transceiver with dual enable, non-inverting (3-State)

74LVT623

#### **FEATURES**

- Separate controls for data flow in each direction
- Output capability: +64 mA/-32 mA
- TTL input and output switching levels
- Input and output interface capability to systems at 5 V supply
- Bus-hold data inputs eliminate the need for external pull-up resistors to hold unused inputs
- Live insertion/extraction permitted
- No bus current loading when output is tied to 5 V bus
- Power-up 3-State
- Power-up reset
- Latch-up protection exceeds 500 mA per JEDEC Std 17
- ESD protection exceeds 2000 V per MIL STD 883 Method 3015 and 200 V per Machine Model

#### **DESCRIPTION**

The 74LVT623 is a high-performance BiCMOS product designed for  $V_{CC}$  operation at 3.3 V.

The 74LVT623 device is an octal transceiver featuring non-inverting 3-State bus compatible outputs in both send and receive directions. The 74LVT623 is designed for asynchronous two-way communication between data buses. The control function implementation allows for maximum flexibility in timing. This device allows data transmission from the A bus to the B bus or from the B bus to the A bus, depending upon the logic levels at the Enable inputs (OEBA and OEAB). The Enable inputs can be used to disable the device so that the buses are effectively isolated.

Control of data flow from B to A is similar, but using the  $\overline{\text{EBA}}$ ,  $\overline{\text{LEBA}}$ , and  $\overline{\text{OEBA}}$  inputs.

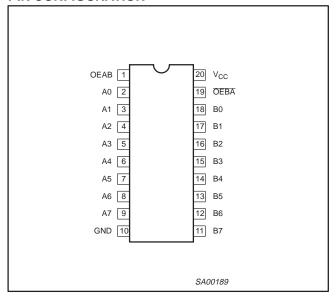

#### **QUICK REFERENCE DATA**

#### NOTES:

- Stresses beyond those listed may cause permanent damage to the device. These are stress ratings only and functional operation of the
  device at these or any other conditions beyond those indicated under "recommended operating conditions" is not implied. Exposure to
  absolute-maximum-rated conditions for extended periods may affect device reliability.
- 2. The performance capability of a high-performance integrated circuit in conjunction with its thermal environment can create junction temperatures which are detrimental to reliability. The maximum junction temperature of this integrated circuit should not exceed 150 °C.

3. The input and output negative voltage ratings may be exceeded if the input and output clamp current ratings are observed.

| Δl <sub>CC</sub>   | Additional supply current per input pin <sup>2</sup>         | $V_{CC}$ = 3 V to 3.6 V; One input at $V_{CC}$ –0.6 Other inputs at $V_{CC}$ or GND            | 3 V,  |                      | 0.1              | 0.2        | mA |

- All typical values are at V<sub>CC</sub> = 3.3 V and T<sub>amb</sub> = 25 °C.
   This is the increase in supply current for each input at the specified voltage level other than V<sub>CC</sub> or GND.
   This parameter is valid for any V<sub>CC</sub> between 0 V and 1.2 V with a transition time of up to 10 msec. From V<sub>CC</sub> = 1.2 V to V<sub>CC</sub> = 3.3 V ± 0.3 V a transition time of 100  $\mu$ sec is permitted. This parameter is valid for  $T_{amb}$  = 25 °C only.
- 4. Unused pins at V<sub>CC</sub> or GND.
  5. For valid test results, data must not be loaded into the flip-flops (or latches) after applying the power.

#### NOTE:

#### **AC WAVEFORMS**

 $V_M = 1.5 \text{ V}, V_{IN} = \text{GND to } 2.7 \text{ V}$ 

Waveform 1. Propagation Delay for Non-Inverting Output

Waveform 2. 3-State Output Enable Time to High Level and Output Disable Time from High Level

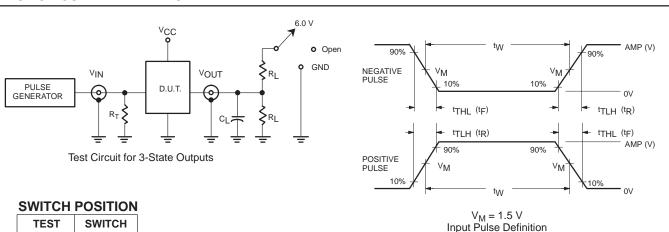

Waveform 3. 3-State Output Enable Time to Low Level and Output Disable Time from Low Level

<sup>1.</sup> All typical values are at  $V_{CC}$  = 3.3 V and  $T_{amb}$  = 25°C.

### 3.3 V octal transceiver with dual enable, non-inverting (3-State)

74LVT623

### **TEST CIRCUIT AND WAVEFORM**

| TEST                               | SWITCH |
|------------------------------------|--------|
| t <sub>PLH</sub> /t <sub>PHL</sub> | Open   |
| t <sub>PLZ</sub> /t <sub>PZL</sub> | 6V     |
| t <sub>PHZ</sub> /t <sub>PZH</sub> | GND    |

#### **DEFINITIONS**

R<sub>L</sub> = Load resistor; see AC CHARACTERISTICS for value.

 $R_T = -$  Termination resistance should be equal to  $Z_{OUT}$  of pulse generators.

#### Data sheet status

| Data sheet status <sup>[1]</sup> | Product<br>status <sup>[2]</sup> | Definitions  |
|----------------------------------|----------------------------------|--|
| Objective data                   | Development                      | This data sheet contains data from the objective specification for product development.  Philips Semiconductors reserves the right to change the specification in any manner without notice.   |
| Preliminary data                 | Qualification                    | This data sheet contains data from the preliminary specification. Supplementary data will be published at a later date. Philips Semiconductors reserves the right to change the specification without notice, in order to improve the design and supply the best possible product.                                     |
| Product data                     | Production                       | This data sheet contains data from the product specification. Philips Semiconductors reserves the right to make changes at any time in order to improve the design, manufacturing and supply. Changes will be communicated according to the Customer Product/Process Change Notification (CPCN) procedure SNW-SQ-650A. |

<sup>[1]</sup> Please consult the most recently issued data sheet before initiating or completing a design.

#### **Definitions**

**Short-form specification** — The data in a short-form specification is extracted from a full data sheet with the same type number and title. For detailed information see the relevant data sheet or data handbook.

Limiting values definition — Limiting values given are in accordance with the Absolute Maximum Rating System (IEC 60134). Stress above one or more of the limiting values may cause permanent damage to the device. These are stress ratings only and operation of the device at these or at any other conditions above those given in the Characteristics sections of the specification is not implied. Exposure to limiting values for extended periods may affect device reliability.

**Application information** — Applications that are described herein for any of these products are for illustrative purposes only. Philips Semiconductors make no representation or warranty that such applications will be suitable for the specified use without further testing or modification.

#### **Disclaimers**

**Life support** — These products are not designed for use in life support appliances, devices or systems where malfunction of these products can reasonably be expected to result in personal injury. Philips Semiconductors customers using or selling these products for use in such applications do so at their own risk and agree to fully indemnify Philips Semiconductors for any damages resulting from such application.

Right to make changes — Philips Semiconductors reserves the right to make changes, without notice, in the products, including circuits, standard cells, and/or software, described or contained herein in order to improve design and/or performance. Philips Semiconductors assumes no responsibility or liability for the use of any of these products, conveys no license or title under any patent, copyright, or mask work right to these products, and makes no representations or warranties that these products are free from patent, copyright, or mask work right infringement, unless otherwise specified.
